PATIENT SUCCESS

Successful Treatment of 25 Soccer Players Against Acute Tendon Apathy

Dr. Marco Cazares, DC, CA

The following study presents a clinical review of 25 patients (soccer players) with lower extremity Tendon Apathy. Of this sample, 14 patients were seen for acute tendonitis. 6 patients came for acute Deltoid ligament strains. The remaining 5 patients suffered from knee patella tendonitis.

All 25 cases submitted to the trial therapy used taping orthopedic support and Wei Labs FASTT Patches.

All 25 patients obtained very good to excellent responses (after the first week of trial). For **76% (19) of patients two FASTT Patches were sufficient for an almost total resolution of the symptoms.** 24% (6) of the sample required 4 FASTT Patches to obtain the same response. It is noted that the use of Wei herbal patches for the treatment of acute tendon apathy is a promising treatment protocol for all physicians who encounter this condition.
